

# Mobility is a way to improve people's lives

In the developing world, bicycles are sometimes the only way to get around. Unfortunately they are often unsuited to fit the true needs of the local population. The Mundo is a Utility Bike that meets the **real needs** of the people in the emerging nations. A more **practical** bicycle with the **volume** of a car trunk, the possibility to **carry passengers**, the **nimble handling** and **solidity** of a mountain-bike, at an **affordable** cost for the wallet or environment. The Mundo is perfectly **suited for the transport of cargo on uneven and difficult terrain**, on paved city streets or back country singletracks.

## >> The bike "pick-up" is a tool for sustainable development and appropriate mobility

- An appropriate and environmentally friendly solution for: humanitarian projects, developing world entrepreneurs, base of the pyramid distribution, families, farms and health workers.
- A mobility solution enabling individuals and families to access transportation hubs for commerce, health, employment or education needs; therefore improving their socioeconomic situation.
- The cost of this "pick-up" bike is affordable, offering a clean mobility solution at a reduced cost and enabling the conservation of resources and the protection of the environment.
- The Mundo Utility Bike is "democratic," it opens the gates of development and mobility to millions of women, children and families.
